

HARLACHER H35-1

pneumatic tensioning unit

*electronic, programmable
control unit*

*pneumatic clamps,
type 6P*

*250 mm
wide clamps*

HARLACHER AG

Siebdrucktechnik
Textildrucktechnik

The HARLACHER H35-1 is ideal for tensioning of different frame sizes. Slight discrepancies, caused when laying the mesh in the clamps, can also be optimally compensated for with this system. The system is suitable for all kinds of mesh incl. stainless steel.

Maintaining an even tension over the entire screen is optimised by the built in pre-stretch system.

A combination of two clamp sizes, 150 mm and 250 mm, allow the H35-1 to be adapted to various frame sizes within its size spectrum. Standard sizes are available for frame outside dimensions of 1000 x 1000 mm to 3000 x 3000 mm.

The HARLACHER H35-1 can be used with a manual or an electronic control unit. 20 individual programmes can be stored in the electronic control unit, enabling entire series of screens to be tensioned identically. Both manual and electronic control units are available in single and double circuit tensioning modes.

This unit caters for the requirements of all industries and applications namely; an exact and repeatable final tension, pre-stretching the frames, tensioning at an angle, easy adjustment to various frame sizes and it's a HARLACHER!
