

# HARLACHER H44-1

coating machine

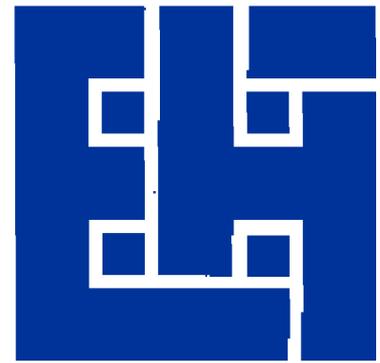

easy adjustment for various frame profiles

mechanism for optimal coating procedure

electronic control unit with the possibility to save several coating programs

**HARLACHER AG**

Siebdrucktechnik  
Textildrucktechnik

The HARLACHER H44-1, is the coater created to produce even and exact coating results on small and medium sized screens.

The electronic control unit enables you to program and save up to 20 coating programs. The optimised, adjustable, pneumatic elements provide excellent coating, independent of screen size and mesh tension.

Special care was taken to add the latest technology and newly designed parts to the HARLACHER quality that is recognised world wide. This combination results in a machine with high service time but low costs and maintenance.

The newly designed coating carriage can be adjusted to provide uncompromising results. The smooth start and scrape off allow optimal utilisation of the entire screen surface.

The H44-1 is available in two sizes and provides economic coating at an excellent price performance ratio.
